SUMMARY

Full Stack Software Engineer with 3+ years specializing in **high-throughput backend systems**, real-time architectures, and domain-specific platforms including **iGaming (RGS, game engines)** and AI-powered developer tooling. Built production systems handling **100K+ concurrent users** with sub-100ms p99 latency. Core stack: Node.js, NestJS, GraphQL, MongoDB, Redis, React, Next.js, AWS.

SKILLS & TECHNOLOGIES

Back-End: Node.js, NestJS, Express.js, Fastify, GraphQL, REST APIs, Socket.io, BullMQ
Front-End: Next.js, React.js, Redux, Zustand, TypeScript, JavaScript (ES6+), TailwindCSS
Databases: MongoDB, PostgreSQL, Redis (Caching & Pub/Sub), Firebase
Cloud & DevOps: AWS (EC2, S3, CloudFront), Docker, Nginx, GitHub Actions, CI/CD

EXPERIENCE

Freelance Software Engineer

March 2026 – Present

Independent

Remote

- Architected **ShortCode**, a URL shortener handling **50K+ RPS** with sub-40ms p99 redirect latency via Fastify, Redis caching, and BullMQ async job queues — fully containerized with Docker and deployed to AWS EC2 behind Nginx with SSL termination.
- Built and published **CodeGuardian AI** on the GitHub Marketplace: a GitHub Actions tool automating PR code reviews using OpenAI GPT with a configurable rule engine covering security (SQL injection, hardcoded secrets), performance (N+1), and architecture smells — supports local testing via **act**.

Full Stack Software Engineer

July 2022 – October 2025

Pixentech Private Limited

Hyderabad, India

- Designed and shipped **iGaming backend infrastructure** — including slot game engine, table game engine, and provably fair RGS (Remote Gaming Server) architecture — using Node.js, Socket.io, and Redis Pub/Sub, supporting real-time multiplayer game sessions at scale.
- Engineered full-stack production applications with Node.js, GraphQL, REST APIs, MongoDB, and Redis caching, reducing average API response time by **25%** and supporting **100K+ concurrent users**.
- Built real-time event systems using Socket.io and Redis Pub/Sub, cutting data synchronization latency by **60%** under peak concurrent traffic.
- Automated CI/CD pipelines via GitHub Actions with AWS EC2/S3 deployments, reducing release cycle time by **~40%** and eliminating manual deployment errors.

PROJECTS

ShortCode | *Node.js, Fastify, MongoDB, Next.js, BullMQ, Redis, Docker, AWS EC2, Nginx* | [GitHub](#)

2026

- Delivered sub-40ms p99 redirect latency at 50K+ RPS via Redis caching with a fully decoupled async analytics pipeline (BullMQ) for click tracking, link expiry, and email notifications.
- Implemented real-time analytics dashboard with Socket.io pushing live click-count and geo-data to Next.js frontend; deployed with Docker Compose, Nginx reverse proxy, and zero-downtime restarts.

CodeGuardian AI | *Node.js, OpenAI API, GitHub Actions, GitHub REST API* | [GitHub Marketplace](#)

2026

- Published Marketplace Action that auto-reviews PRs with inline GPT comments and markdown summaries; engineered chunked file processing to handle large diffs within OpenAI token limits with per-chunk context preservation.

EDUCATION

North Eastern Hill University

Shillong, India

B.Tech in Information Technology

2016 – 2020
